

Vision Mission Values

Together in motion – we connect the world sustainably with customized logistic services.

Logistics is the backbone of the economy – it connects people, markets, and opportunities. It ensures that supply, production, and trade run smoothly, keeps goods flowing, and paves the way for progress: from climate-friendly transport and resilient supply chains to a functioning circular economy.

At Lagermax, we are proud of this role. Together with our employees, partners, and customers, we actively shape the future of logistics – sustainably, innovatively, and in a spirit of partnership. With our broad portfolio of services, we meet the diverse needs of our customers – and create connections that keep us in motion together.

The Lagermax Group puts people - whether employees, customers or business partners - at the centre of everything we do. True to the motto 'Together in motion', our core values are our daily guide.

People-driven

We create a working environment that is defined by trust, transparency, mutual respect and open communication.

Teamwork, diversity and continuous personal development form the basis of our collaboration and encourage everyone to realise their full potential. We cultivate long-term, trusting relationships with personalised service and individual support.

Working together in partnership, based on mutual respect, clear communication and shared values, enables us to build a strong network - for sustainable success and collective progress.

United in Diversity

With our united diversification, we combine our Lagermax expertise into an offering that delivers real added value to both our customers and our group.

By combining our strengths and synergies, we offer customized solutions that respond flexibly to customer needs.

Together we are stronger – as a reliable and resilient partner.

Future-minded

We actively shape our future and think outside the box - as a family business with a cross-generational vision, we are committed to sustainable growth.

Through a culture of learning we drive innovation and invest specifically in new technologies and digitalization to offer our customers sustainable logistics solutions.

In doing so, we are laying the foundation for a more sustainable future that lasts generations.
